

## PROBLEM STATEMENT

To Some form of direct communication is used to facilitate the interaction of people with disabilities with everyone in the environment, to understand their needs and fulfill those needs.

<b>What does this problem focus on?</b>	Improved devices for speaking disabled peoples.
<b>When does this occur?</b>	To enable a disabled person to interact freely with information.
<b>Why do we need this?</b>	To reduce the daily problems faced by people with disabilities and make it easier for everyone to communicate.
<b>How to do this?</b>	We can also use some artificial micro devices to easily understand the information we say through hand gestures and sensor glasses.
<b>Where it is used?</b>	When people with disabilities face certain problems, the problems can be solved easily through real-time communication.
